

AT 98

Anti-tack agent

Composition : Very fine zinc stearate with some activator

Appearance : WHITE PASTE

Solubility : solubility in water

Stainning : none

Discoloring : none

Storage : in dry and cool place.

Package : 35 kgs carton

Functions :

1. It is very suitable for light and transparent goods and no any bad influence for color °
2. The water solution of AT 98 can have a very thin film on the surface of uncured compounds and avoid to tack between two sheets of compounds. It can be used in TPU which is generated in the water. AT 98 can avoid agglomeration of TPU.
3. AT 98 is very easy and rapidly soluble in the water and can help the compounds to get good release result.
4. ZINC STEARATE of AT 98 can be soluble in heat rubber, therefore, can't find any AT 98 on the surface of compounds after curing.
5. It is an excellent internal releasing agent, has outstanding release effect in silicon rubber.
Add 2 – 5 phr AT 98 together with rubber during mixing.
6. It is easier to soluble in water than powder agents, and doesn't block in hose or sediment.
7. It has more significant anti-tack effect while using in the very soft special masterbatch.

Usage : dilution ratio with water : 1:20, and stir for 30 minutes after dilution in the tank.
