

# CH 236

**Function**

Dispersing agent and internal lubricant for all synthetic rubbers.

**Composition**

A mixture of hydrocarbon compounds and surface active substances.

**Appearance**

white fine powder.

**Density at 20°C**

0.9.

**Discoloration**

none.

**Packing**

paper bags containing 55lbs net weight.

**Action**

Eliminates rubber compounds sticking to mill or calender rolls.

Decrease mixing time through lower operation temperature and produce superior dispersion due to greater wetting character is tics.

Improves mold flow resulting in fewer rejects, ch 236 should generally be able to aid mold release.

Increases extrusion speed with smoother surface on finished part due to greater internal lubrication.

**Dosage**

1 - 10 phr.
