

AS-73

Anti-shrinking agent

Composition : Modified castor oil cross-linked with peroxide

Appearance: Yellowish particles

Packing: 25kg / bag

Function :

1. AS-73 can reduce the internal friction of rubber and EVA product and further decrease the internal heat of product. Low internal heat cause low expansion rate and further reduce the shrinkage rate.
2. AS-73 helps to untie the entanglement of the molecules and further form less internal tension, better orientation of the molecules will produce less shrinkage.
3. AS-73 can be used as plasticizer and compare with normal plasticizer, AS-73 has no volatile substances so it would not influence the product volume by material volatility.
4. AS-73 can increase the viscosity of product and further provide the uniform foam pores and size stable for product.

Note:

1. Recommended for products with a foaming hardness higher than 50 Askers.
2. Recommended mixing temperature: 120 degrees
3. Recommended mixing time: 6-7 minutes
